

LOGONET elastic nets

TECHNOLOGICAL RECOMMENDATIONS

The raw material can be molded directly in the net, or for the molding process, it can be pre-wrapped in the collagen film or the cellulose one. For this purpose, it is recommended to use manual and automatic applicators, although the molding process can also be carried out manually.

Diameter, mm	Recommended diameter of the applicator tube, mm
80	70 - 80
100	90 - 100
125	110 - 120
150	130 - 140
200	190 - 200
220	210 - 220

The recommended diameter of the applicator tube in the above table should be considered as the net manufacturer's recommendation, and therefore, each meat product manufacturer should independently find out which net diameter meets their needs.

During heat treatment, it is allowed to use all traditional heat treatment technologies, including baking.

SHELF LIFE AND STORAGE CONDITIONS:

The products, provided that the integrity of the original package is preserved, temperature conditions - 5-23°C, relative humidity - maximum 65%, are kept for 36 months from the date of delivery, without losing their original properties.
